

## **Lock-Top: Two Energy-Saving Solutions to Fireplace Problems**

### **Lock-Top Damper**

Your leaky throat damper costs you hundreds of dollars a year in lost energy. Just like if you left a window open year round. The Lock-Top Damper mounts on top of your

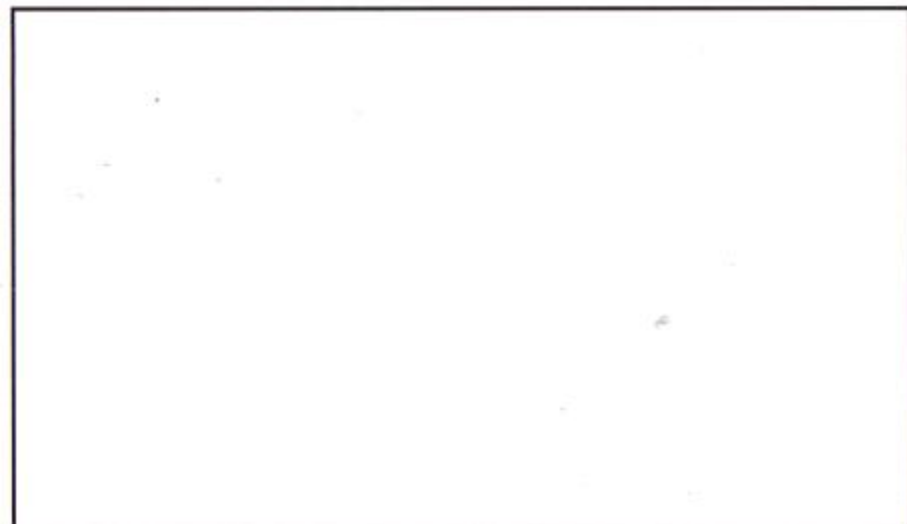

chimney. Its cast-aluminum and stainless steel parts seal with a silicone rubber gasket for airtight protection from the elements and energy loss. When you install a Lock-Top Damper, you'll not only lower your energy bills, you'll love the cozy comfort of your home.

### **Lock-Top II Chimney Cap/Damper**

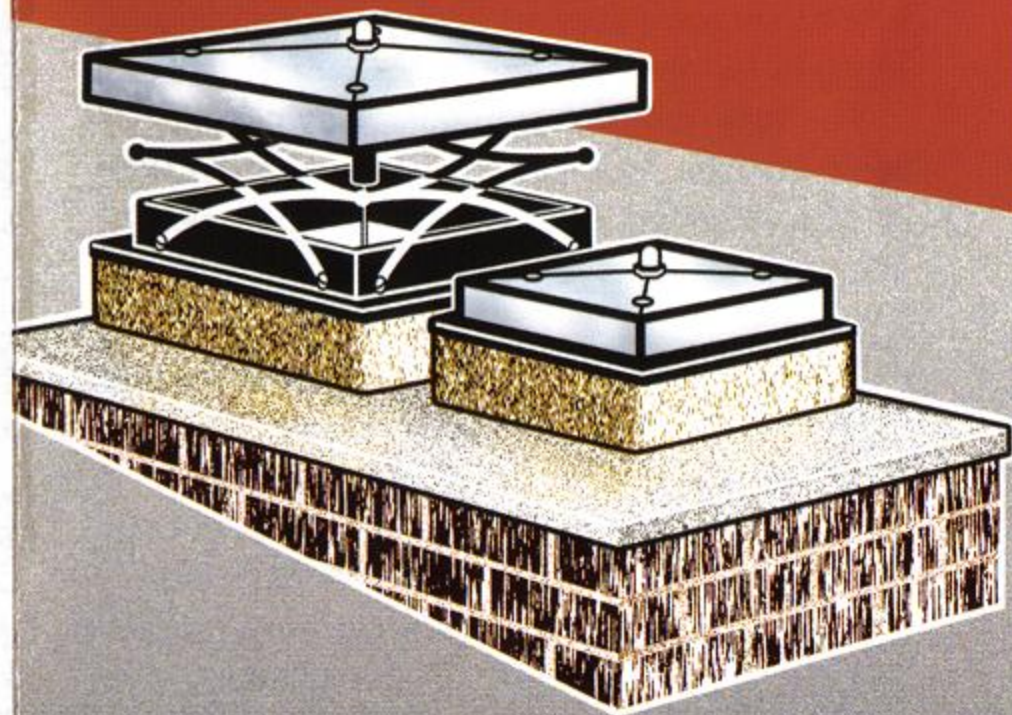

The Lock-Top II gives you the added protection of a stainless steel chimney cap surrounding your damper. The damper seals cold and hot air out, and the cap provides extra rain, animal, and spark protection.

## **The Open and Shut Solution to Fireplace Problems!**

# Keep heat and energy in...rain and animals out

If it's not the cold drafts on your feet, it's the high energy bills in your mailbox.

You've got a fireplace problem you probably don't know about. It's your damper. It leaks. Not a lot mind you, but enough to be costing you over \$200 a year in lost energy.

## **The Lock-Top Damper seals tight with a silicone rubber gasket**

That's right, a *rubber* gasket, not metal to metal. Metal-to-metal throat dampers were designed back when energy was cheaper, so a few leaks were no big deal. You can't say that today. A Lock-Top Damper seals tight, so virtually no air, and thus no heat or air conditioning gets lost up your chimney.

The Lock-Top also eliminates downdrafts, seals out rain which can deteriorate the inside of your chimney, and prevents entry by pests like squirrels, raccoons, and nesting birds.

## **The Lock-Top mounts on top of your chimney**

On top? Yes, that is the perfect location to create an airtight seal.

A cable drops down your flue and attaches to a handle which mounts where you can reach it for convenient opening and closing.

- Replaces leaky throat dampers
- Energy efficient – seals in furnace heat and air conditioning
- Keeps animals out of your chimney
- Features the chimney fire safety device
- Made of cast-aluminum and stainless steel
- Operates easily from inside the firebox
- Lifetime warranty

**Superior stainless steel and cast-aluminum construction equal a lifetime warranty**

The Lock-Top Damper is made of cast-aluminum and stainless steel, precision fitted with our special silicone rubber gasket. These high-quality materials add up to a factory lifetime warranty for you.

Open and close the Lock-Top Damper easily with this handle mounted in your firebox.

## **Lock-Top Dampers are only available from chimney and hearth professionals**

Professionals stake their reputation on what they sell. Lock-Top Dampers are only sold through professionals because it takes a professional for proper sizing and installation.

## **Say "yes" to savings**

Put the Lock-Top Damper to work for you. Save energy, stay warm, protect your chimney from moisture and your home from pests. These benefits will all be yours when you say "yes" to Lock-Top.
